

Alex Dalglish-Morel

Senior Software Developer

Calgary, AB | alex.dalglishmorel@gmail.com | linkedin.com/in/alex-dalglish-morel | alexdalgleishmorel.com

PROFESSIONAL SUMMARY

Senior software developer with many years building and scaling backend services and full-stack features for a connected-hardware IoT platform serving tens of thousands of devices. Progressed from intern to Senior, leading multi-team projects end to end and owning API design, performance, observability, and production reliability. Equally strong in backend and distributed systems and in full-stack delivery, with a track record of shipping under tight deadlines and driving cross-team execution.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, TypeScript, SQL

Backend & APIs: REST API design, Node.js, Python, PHP, microservices, asynchronous queue/Lambda pipelines, RBAC & access management

Cloud & Infrastructure: AWS (Lambda, SQS, CloudWatch, OpenSearch), Terraform, Docker, infrastructure as code, CI/CD

Frontend: Angular, React

Databases: PostgreSQL, SQL, Doctrine migrations

Observability & Testing: Datadog, JMeter (load testing), Postman/Newman, unit & UI testing

Leadership: Technical leadership, cross-team coordination, code review, mentorship, Agile

PROFESSIONAL EXPERIENCE

Blackline Safety — Calgary, AB

Senior Software Developer Feb 2025 – Present

Promoted from Software Developer to Senior in April 2026 for technical leadership and end-to-end ownership.

- Technical lead on multiple multi-service projects — owning API contract and schema design and coordinating delivery across backend, frontend, firmware, and UX teams, including driving design discussions with lead architects to unblock end-to-end testing under code-freeze deadlines.
- Cut p95 latency on key endpoints by up to **10×** (and 50%+ on others) by profiling and optimizing slow query paths, resolving high-profile customer latency complaints.
- Delivered an alert-delivery and monitor-quality initiative that improved alerting timeliness for **all customers across tens of thousands of devices and users**.
- Hardened distributed services against single-queue and schema-drift failures; added Terraform-based health and no-data monitors and ran deployment-pipeline health assessments across **20+ services** after a major source-control migration.
- Designed and executed a multi-stage, zero-downtime data migration with real-time SQS ingestion, cursor-based pagination, and duplicate-event mitigation.
- Delivered backend infrastructure for a Middle East regional expansion and resolved a multi-month, cross-vendor voice-call defect through sustained coordination with two telephony vendors and our internal teams.

Contract Developer Aug 2023 – Dec 2024

- Delivered backend and infrastructure improvements part-time while completing my degree, including infrastructure-as-code to deploy new SSO functionality to AWS and external-library upgrades.

Back End Developer Intern Sept 2022 – Aug 2023

- Developed and improved REST API endpoints in Python, PHP, and SQL with a focus on efficiency, reliability, and observability, and diagnosed and fixed production bugs across backend services.

Front End Developer Intern May 2022 – Sept 2022

- Built and shipped UI components and tests for the customer-facing Angular fleet-management portal and contributed to major Angular version upgrades and testing-framework improvements.

EDUCATION

B.Sc. Computer Science (Human-Computer Interaction), University of Calgary Dec 2024

PROJECTS

- **River Flow Report App** — Built in collaboration with the Alberta River Surfing Association; delivers real-time river-flow and surf conditions to the local river-surfing community, with an active daily user base. alexdalgleishmorel.com
- **More projects** — recipe-extraction app, configurable analytics dashboards, and others at alexdalgleishmorel.com.
